## Agenda for action

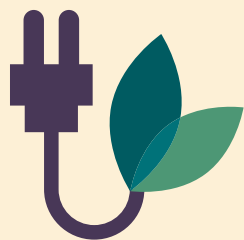

### Nature recovery

Produce a local nature recovery plan to (i) restore and expand habitats and help wildlife thrive and (ii) ensure recreation takes place in the most resilient areas.

Harness the benefits we receive from nature in the New Forest ('natural capital') to generate increased investment and projects.

Help landowners, farmers and commoners switch to the new Environmental Land Management Scheme (ELMS) which rewards working with nature.

### Net zero with nature

Develop a 'net zero with nature' programme with partners and communities to ensure the National Park is carbon neutral by 2050.

Promote and develop best practice in nature-based solutions to meet climate and nature goals.

Help communities to take action on the climate crisis.

### Thriving forest

Support cultural heritage, commoning and local produce to sustain the landscape for future generations.

Invest in green skills and jobs, creating a centre of excellence for the future green economy.

Provide more affordable housing.

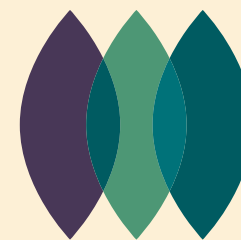

### An inclusive National Park

Create a 'Natural Health Service' within and beyond the National Park, through a programme of measures provided by communities and the health and environment sectors.

Help new and diverse audiences connect with nature, discover why the National Park is special and how to care for it, with a particular focus on young people.

Foster a greater pride in the New Forest, its landscape and cultural heritage.

### Team New Forest

Establish new ways of engaging with our communities and encouraging grassroots action.

Ensure the New Forest is leading the environmental agenda through our work regionally and nationally.

Develop a centre of excellence for data and evidence to underpin our collective decisions and actions and use technology to help us manage the National Park more effectively.
